TECHNICAL BULLETIN OF 22 JULY 1956

A vacuum isn't a hole. It's a collapsed bank. Every lifetime bank is collapsed into a vacuum.

The formula is:

1. Run pc on Start-Change and Stop for *hours* until he is under auditor's control, in-session and (often) exteriorized.
2. Then run him with commands "What are you looking at?" "Good." "Make it solid."

He will eventually hit a vacuum. (He'd hit it faster on "Recall a can't-have" but it's too fast.) Here's the tangle. The vacuum is a supercold mass or an electric shock. This "drank up" bank electronically (brainwashed him). The energy drunk turned black. Hence black cases. (Does not apply only to black cases however.)

3. Run, interspersed with solids and "objective can't-have" on the room, "Tell me an effect object (that drank bank) could *not* have on you," and "Tell me an effect you could have on object." Object may be electrodes or supercold plate or even a supercold glass.

Caution, handle one vacuum at a time. These vacuums go back for 76 trillion years. They were the original brainwash thetans did to one another, then psychiatrists (on the whole track) did expertly (modern psychiatrists are *punks*, modern shock too feeble to do more than restimulate old vacuums).

This is true:

1. We have created the *permanent* stable Clear.
2. In creating him we have a homo novis in the full sense, not just an Operating Thetan.
3. We now know more than life. An oddity indeed!
4. We now know more about psychiatry than psychiatrists. We can brain-wash faster than the Russians (20 secs to total amnesia against three years to slightly confused loyalty).

5. We can undo whatever psychiatrists do, even the toughest grade from away back. We can therefore undo a brainwash in 25 to 75 hours.
6. We can create something better than that outlined and promised in Book One.
